WAGE AND SALARY EARNERS IN CIVILIAN EMPLOYMENT

WESTERN AUSTRALIA

JUNE 1974 TO JUNE 1979

Inquiries regarding these statistics may be made by telephoning Perth 323 5195 or INQUIRIES • by writing to the Australian Bureau of Statistics, 1-3 St George's Terrace, Perth. W.A. 6000.

EXPLANATORY NOTES

This publication contains estimates of wage and salary earners in civilian employment in Western Australia for the month of June of each year from 1974 to 1979. For comparative purposes, estimates for Australia for June 1974 and June 1979 are also included. Estimates for each month are available on application to this Office.

The estimates, except those relating to government employment (Table 2), are based on comprehensive data, referred to as 'Benchmarks', derived by analysing data from the Population Census of 30 June 1971 and other relevant sources such as the Bureau's economic censuses and surveys. Month to month changes shown by current returns are linked to the benchmark data to derive the monthly estimates. The figures used for this purpose are obtained from three main sources: (i) pay-roll tax returns, which are currently lodged by all employers paying more than \$60,000 per year in wages, other than those specifically exempted under the pay-roll tax legislation; (ii) returns from government bodies; and (iii) some other returns of employment (e.g. for hospitals). balance, i.e. unrecorded private employment, is estimated.

The figures relate only to employed civilian wage and salary earners, not to the total labour force. They therefore exclude employers, self-employed persons, unpaid helpers, members of the defence forces and the unemployed. Employees in agriculture and

in private domestic service are not included in the estimates because the available data are inadequate.

The estimated monthly changes are derived mainly from returns from employers relating to establishments or enterprises, while the benchmark figures were derived from particulars recorded for individuals on population census schedules, which do not in all cases provide sufficiently precise information to allow accurate coding of industry. Industry dissections of the census totals of wage and salary earners were therefore adjusted to make them consistent as far as possible with industry coding at the establishment level.

Current data supplied by reporting enterprises or establishments generally refer to persons on the pay-roll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' pay-rolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

The industry classification used throughout this bulletin is the Australian Standard Industrial Classification (ASIC), described in the Bureau publication Australian Standard Industrial Classification (Preliminary Edition), 1969, Volume 1. This

classification differs from that adopted for population censuses before 1971 and the estimates by industry contained herein are not directly comparable with estimates by industry shown in issues of this publication prior to 1976.

As the results of each successive population census become available it is the practice to derive from them new benchmarks for the monthly employment series, and to revise the published estimates for all periods subsequent to the date of the previous census.

Employees of government and semigovernment authorities are included in the figures shown in Table 1. Estimates of the numbers employed by Australian Government, State Government and local government authorities are available separately and are shown in Table 2.

Revision of Series

In estimating final population figures for the period June 1971 to June 1976 allowance has been made for underenumeration in the population census and for other factors. The final figures for June 1971 and June 1976 are considerably higher than those previously published for the two census dates, and it is apparent that the numbers of civilian employees derived from the 1971 population census, and used in determining the benchmarks for the employment estimates in this bulletin, are substantially understated. Consequently, the level of the employment series is too low. A revision of the series, using revised benchmarks and other data, will be undertaken as soon as possible. It is expected that the effect of

the revision will be to raise the level of the current estimates for Australia by some 210,000 persons. Revised estimates should be available in the near future. In the meantime the unrevised series will provide a reasonable indication of current movements.

Related Publications
